

A new minimally invasive technique for treating white spot lesions is by RESIN INFILTRATION, a product of DMG, called "ICON"

An **ICON**ic Smile!

COMPOSITION:

Icon Etch:
15% HCL, Pyrogenic silicic acid, water, additives
Icon- Dry: 99% ethanol
Icon- Infiltrant : Methacrylate-based resin matrix, initiators, additives

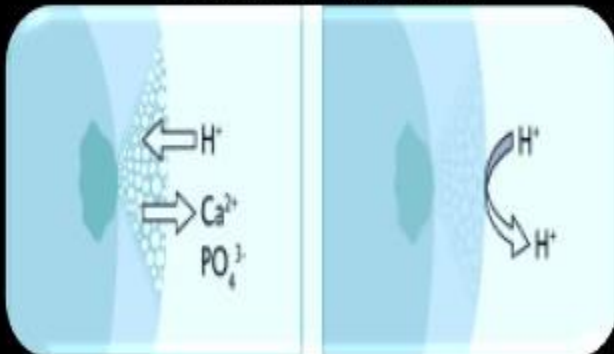

LIMITATIONS:

1. Surface conditioning
2. Porosity of lesion
3. Hydrophobicity of resin

BENEFITS:

1. Minimally invasive
2. Single visit
3. Mechanical stabilization
4. Deeper penetration
5. Retards lesion progress
6. Minimizes risk of secondary caries
7. High patient acceptance

MODE OF ACTION

WHEN TO USE?

Incipient Caries

Fluorosis

MIH

Trauma

ICON IN ACTION

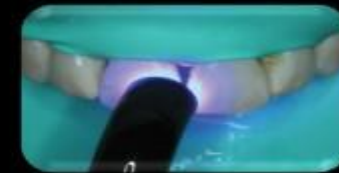

Pre-operative

Icon Etch

Icon Dry

Icon Infiltrant

Light Curing

Post-operative
