

Route of the Roots - Guided endodontics

An alternative to conventional access cavity preparation that uses CBCT scans for access to apical portion of root canal during complex cases and surgical endodontics.

STATIC GUIDED ENDODONTICS

Cylinders or “sleeves” are designed to allow stable and quantified access of a drill to interior of root canal through drill hole.

Dens Invaginatus

Endodontic retreatment

Dens Evaginatus

Anomalous Teeth

APPLICATIONS

Pulp Obliteration

Rotated Teeth

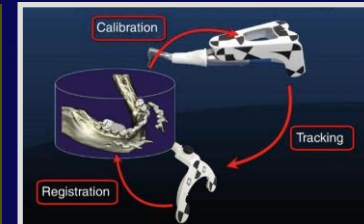

Endodontic Surgery

DYNAMIC GUIDED ENDODONTICS

With help of stereocamera connected to dynamic navigation system, trajectory of drills into pulp chamber and root canal is coordinated in real time.
