

Gentle Wave System-An Innovative Minimally Invasive Approach To Root Canal Disinfection

INTRODUCTION

- Minimally Invasive Approach to root canal disinfection
- Utilizes Multisonic Ultracleaning Technology
- Cleans microscopic spaces within root canals
- Conserve precious tooth structure

Sonendo
SAVING TEETH. IMPROVING LIVES.

Procedure
instrument /
handpiece

PARTS

Gentle
Wave
System
console

Delivery of
multisonic energy
& optimized
procedure fluid

Removal of
debris, biofilm
from all canals &
complex anatomies

MECHANISM

This creates
Useful
cavitation

Microscopic
fluid bubbles
form in the
procedure fluid

ADVANTAGES

- Eight to ten times faster tissue dissolution (Markus Hapasaalo et.al 2014)
- Zero extrusion at apex (Charara K, Friedman et.al 2016)
- Needs minimal instrumentation (Prashanthi Vandrangi et.al 2016)
- Successful healing in the tooth (Asgeir Sigurdsson et.al 2016)

97.3% - Success rate of GWtreatment

Patients report no pain after T/t - 96.6%
