

BIOMIMETIC DENTISTRY: A SILENT REVOLUTION

Biomimetic dentistry is the art and science of repairing damaged teeth with restorations that imitate the Living tissues in terms of appearance, function and strength.

BIOMIMETIC RESTORATIVE DENTISTRY

Marine biomimetics

Shortcomings of traditional dentistry

- Tooth structure loss
- Filling issues
- Potential for allergic reactions

Paradigms of biomimetic dentistry

- Maximum bond strength.
- Preserve pulp vitality.
- Ultra conservative tooth preparation.
